

Manufacturer - the company, which first, on the domestic organic grocery market, began to carry out its activities in the framework of the «from field to table» productive chain (from raw material production to product promotion on the market).

Manufacturer - processing plant of own-produced organic milk with capacity of 30 tons per day that combines the traditions of generations in production, the latest technology and the European experience.

**The motto is «Responsibility for the future»!**

Therefore, work is based on such main categories:

- \* Security
- \* Honesty
- \* Effectiveness
- \* Leadership

Manufacturer is part of a vertically integrated company that consists of four complementary businesses that operate in the field of organic crop farming/livestock and has completed a full cycle of production - from feed growing, livestock management of meat and milk herd to raw milk processing and the production of the final product.

The high quality of our milk is achieved by the facts that farms have modern European equipment for hands free milking, low human factor and lack of milk contact with air, and cows consume organic feed and graze on organic pastures.

The whole process - from growing the feed to the production of end products – is controlled by the International certification company «Organic Standard».
