PHOTOBOOKS HANDMADE

- Printing on Epson Premium Luster PhP
- Other variants:
 - Fuji metallic
 - Fuji silk paper
- Epson UltraChrome HDR ink
- Hard page with 0,5 mm plastic
- Handmade
- Individual cover (with inserts of photos, crystals, gold labels)

PHOTO BOOK PRODUCTION

Stage 1 - PRINTING ON EPSON PREMIUM LUSTER PHP

Stage 2 - CREASING

Creasing is carried out pneumatically, wherein the force of impact of blade is designed in a way the photo paper fibers remain intact.

Stage 3 – BOOK BLOCK ASSEMBLY

Creased copies are collected in book blocks. This is a very important stage, which determines the shape retention and the quality of the book for long usage.

Stage 4 - PRESS

The final binding occurs during the cooling of the block under press.

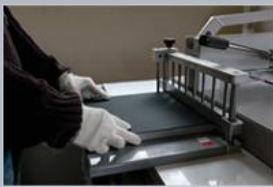

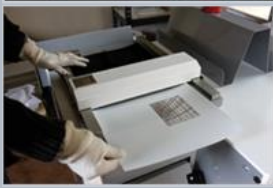

Stage 5 - BOOK-EDGE TRIMMING

Stage 6 - COVER MAKING

We do not use universal covers; the cover template is calculated and made in each individual case. It provides a long-term book usage.

Stage 7 - BINDING OF BLOCKS WITH THE COVER

This is a difficult and most crucial moment in the final assembly of the book on which depends life of book cover and the way the book will open. Also the pages should not crackle during turning. Photo paper is a very complex material in bookbinding, and only under strict technology it is possible to get a high-quality photo book.
