With our large team of developers engaged, we provide a full range of services in the following areas:

- Web Solutions
- Mobile apps
- Desktop software
- E-commerce

That includes:

- Design
- FrontEnd
- BackEnd
- QA (Testing)
- Tech support

The main specializations

E-COMMERCE
Full cycle development of online stores and market places by using omni-channel services and BigData.
Technologies: Magento, 1 CE & EE Magento 2SQL and NoSQL DB, Cache (Varnish, Memcached)
Projects: AUCHAN, OYY, Budynok Igrashok

FINTECH
Development of software for financial sphere. Different solutions for Banks.
Technologies: iOS, Android, AngularJS, ReactJS, Java
Projects: Internet and Mobile Banking, Integration with payment systems

IOT
Software for hardware development.
Technologies: Java EE (Spring and Hibernate frameworks) Android Application (Java) Cisco CMX
Projects: Skywell Smart Tracking

SAAS
Development of an electronic voting platform.
Technologies: Java EE, Web 1C8, Front-end Angular2 and Android
Projects: Skywell Order Management

Expertise and confidence.
International companies entrust us with implementation of their projects.

Cisco, Auchan, Syngenta, Credit Agricole Bank...
and other international companies

Our advantages

Schedule guarantee and compliance with the European quality standards. We love accuracy and we know the value of customer's time. We are interested to make a quality product from the scratch and to complete tasks in due time.

A unique development. We develop unique individual solutions tailored to the needs and peculiarities of your business.

Professional and prompt feedback. You work with one person, but it is a big professional team consisting of developers, marketers, and business consultants that works on your problem.

We are confident in the quality of our work. We test run your project so you can reassure in our competence.

We respect the privacy of our customers and, if necessary, sign a non-disclosure agreement (NDA)

We support our customers in all project stages – be it a startup, or a project of a major international company. We provide full support to company's expansion into new markets.

Service packages and technology stack

Our Service Packages

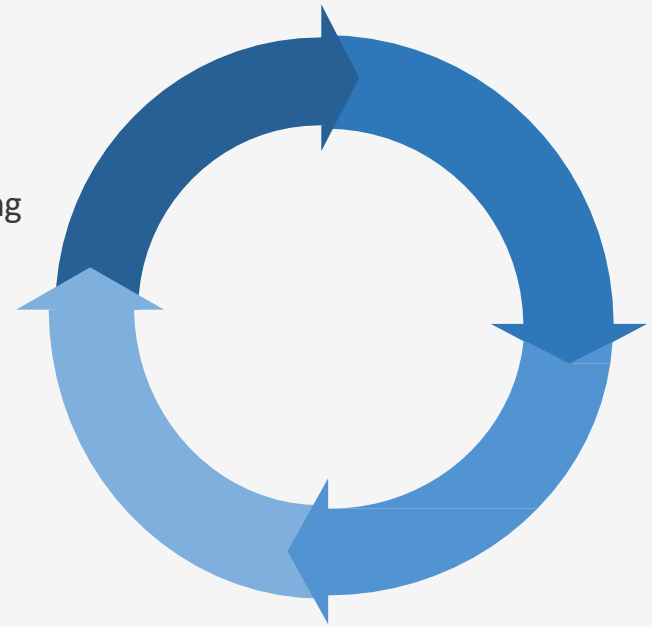
Our solutions delivery lifecycle

4

Support Stage

- Technical Support
- Maintenance
- Performance engineering



1

Initiation Stage

- Research
- Usability engineering
- Prototyping

3

Deployment Stage

- Training
- Sales Support
- Deployment

2

Development Stage

- Product development
- Testing and QA
- Documentation

Our key value points

Full-cycle service
Supporting any stage of your product's life-cycle

Reliability & Maintainability
Clear commitments regarding the results

Flexibility
Unique expansion possibilities to meet your specific demand

User Centric
Omni-channel development across technologies and platforms

Strong expertise
We're not just coding but apply best practices in SW technologies and processes as well as provide marketing support of your product way from idea to market.

Client Oriented
Ambitious and enthusiastic team that strives to build long term and fruitful relationship with each of our clients.

Project steps and communication flow

Project implementation steps

Pre-study	Discover	Define	Design	Develop	Prepare	Launch	Support
Workshops Requirements Strategy & advice	Workrshops Prototyping Solution design	Scope Plan	Information architecture Graphic design E-commerce optimization	Plan & priorities Develop Sprint test Sprint demo	Train Configure & populate Final test	Prepare Go-live Optimise	SLA Issue Tracking System Response Time

Our key value points

1

Exploring the project.
Learning the client's viewpoint, requirements and implementation area of e-commerce project. Budget and time risks estimation. This phase is the first step to successful project, determines the ambitions and costs level, related to the different phases of project.

2

Detection of details and common understanding.
This phase includes a series of meetings and projects discussions to form a common vision of what we want to achieve. The ultimate goal is to form a list of requirements - description of functionality, prototypes and sample solutions.

3

Defining solutions.
Our project team is working on requirements analysis and defining solutions to determine clear goals and development phases. The end result is the document approval, with work specification and clear indication of costs and time input.

4

Design Prototyping.
Visualization and design animation. The final defining of solution architecture

5

Development.
We use the scrum and agile software development. Priority tasks are divided in two-week sprints. At the end of 2 weeks we show the intermediate results.

6

Project handover.
Our team delivers completed project to the client. Client investigates the results, makes settings and tests. Client forms a list of issues that can impede the transition to the next phase.

7

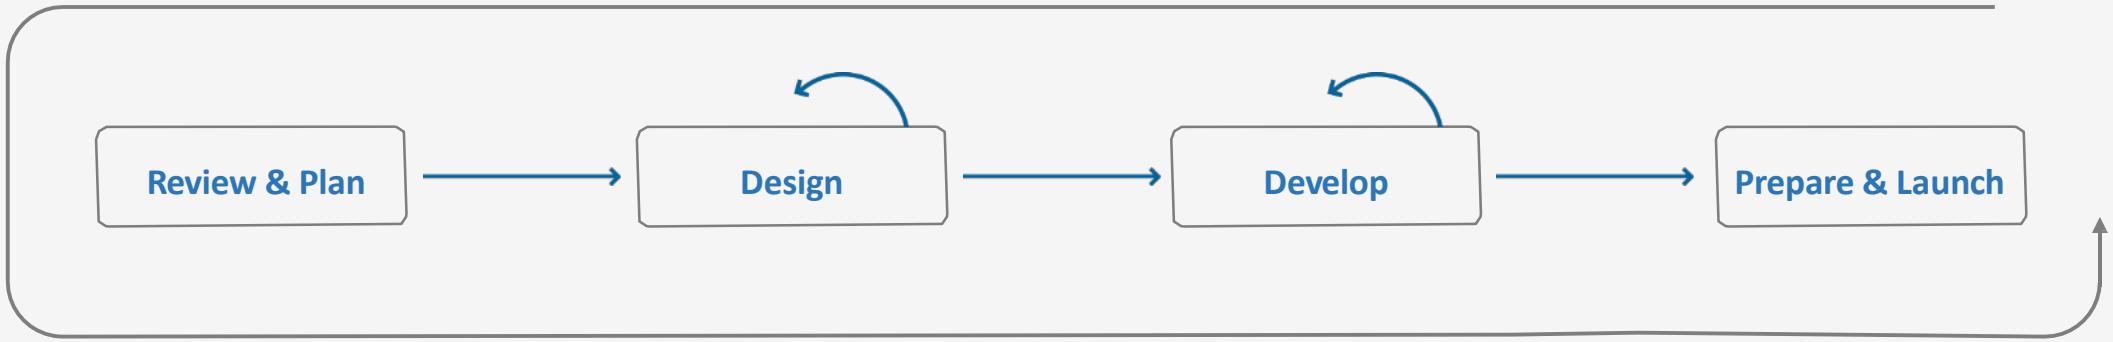
Project launch.
Client's team is focused on identification of issues impeding the project acceptance. While our team is focused on operative resolving of these issues. We help client go through the stabilization time before proceeding to the evolution and maintenance phase.

8

Support.
After project launch we provide additional application support services. Support engineers using issue tracking system manage all tickets according agreed SLA

Project maintenance and evolution approach

Once the project is released, we provide the client with a continuous cycle of his project evolution and optimization



Review and plan
Analysis of data, tests and user reviews

Drafting and design Developing solutions.
Design and visualization of required tasks.

Development
Development and testing cycle of one to two sprint length. Focused on small but frequent releases.

Preparation and launch
Preparation, final testing, project handover to the client and launch.

Project communication flow
